Scatter plot showing the relationship between `mean_min_depth` (x-axis) and various variables (y-axis). The variables are labeled with text boxes: `Mass`, `Westernness`, `HWI`, `Dist_toCOD`, `Habitat`, `sp_COG_long`, `moran`, `sd_PC2`, `Range.Size`, and `sd_PC1`. The plot shows a clear separation between the variables, with `Mass` having the highest value and `sd_PC1` having the lowest. The `mean_min_depth` values range from approximately 2 to 15.
